Feedback on the alternative methods proposed at Stakeholder Meeting	New alternative you would like to be considered by AWBA staff	Other comments or feedback
Don't like phase methods that extend over 30+ years. Like the incentive based which encourage water conservation but seems to be difficult logistically.	One time release approach allowing subs to choose when to use in fix time frame. Allows those who need early on to use right away while those without urgent need to spread out or use at desired time.	Open to LTSC distribution over physical water.
