

Town of Gilbert	
Feedback on the alternative methods proposed at Stakeholder Meeting	Other comments or feedback
<p>Gilbert supports the comments submitted by AMWUA on the presented alternatives and supports up to a 20% pro-rata distribution.</p>	<p>We would like to better understand the wet water recovery options and what infrastructure investments are needed to provide wet water distribution. Gilbert would like to see wet water recovery occur from TDRP, however we recognize that it will take a large investment in well, and likely treatment, infrastructure to access this supply. Under all potential distribution methods, the cost for investing in wet water recovery from TDRP should be evaluated to show how the available years of firming affects the useful life and operation of TDRP.</p> <p>The outcome of this discussion on the firming policy may need to be revisited once the post-2026 Colorado River operations are determined. However, Gilbert supports establishing a planning framework and a maximum distribution percent so that we know the minimum number of years that firming will be available.</p>
